

Dust Mask Respirator

GVS SPR457 Elipse P100 Dust Half Mask Respirator

By Rob Littiken, TNC 04/20/20

I find the mask to be well suited for many tasks. I use this on the smoky fire lines while driving a UTV, also when cleaning seeds and many other tasks in conservation where it's dusty. It has 2 P100 filters that filter out 99.97% of particles, as compared to the disposable N95 mask that only filter 95%. It also seals to your face much better than the disposable masks, so it works much better. The 2 filters are replaceable.

Pros:

- Filters 99.97% of particles
- Comfortable.
- Seals well
- Not too bulky

Cons:

- Made of silicone rubber, so could melt. Although that much heat on your face and you have many other problems.
