

## Hot Shield Face Protector Mask Model HS-2

By Rob Littiken, TNC, 04/05/20

I own this face shield/mask. This face shield has a place to install a N95 dust mask into it and help with some inhalation of fumes. While the N95 mask only removes 95% of particulates and doesn't remove the really small ones, which I have been told are the harmful ones. It does help remove some of the smoke and I find that I have less black residue in my nasal passages. It is made of fire-resistant Carbon X and works very well to keep the heat off your face. I only wear this when I am working in heavy smoke or heat.

### Pros:

- Great face shield and neck protection.
- Helps remove some of the particles you breath in.
- Well made.
- Replaceable regular N95 mask.

### Cons:

- Mask part doesn't seal perfectly against your face.
- Only N95, so doesn't remove a lot of the harmful particles.
- Like many pieces of PPE, it can be cumbersome to wear.
